(54) CONTROLLER AND CONTROL TERMINAL EQUIPMENT FOR COPYING MACHINE

(57)Abstract:

PURPOSE: To attain correspondence when originating calls from two or more copying machines duplicate by commanding the disconnection of a communication channel from a communication terminal equipment when connection with a centralized controller is inhibited by an originating call controller during the connection with the centralized controller.

CONSTITUTION: The constitution is adopted so that only a data terminal allowed by the originating controller 6 activates a modem 52 when the originating calls from the other data terminals B - N are duplicated. In other words, when it is judged that the priority of the other copying controllers is high, the connection of the other copying machine controllers has the priority. In the copying machine controller which is in data communication with the centralized controller, the connection of the centralized controller is released. Thus, when requirements for the originating call are duplicated, proper control can be carried out.
